**OVERVIEW**

The SMC6128PL2 provides wire speed 10/100 Fast Ethernet switching with built-in PoE features specifically designed for SMB workgroup environments. By supporting 802.3af POE on all 10/100 ports it enables easy installation of PoE devices such as IP Phones and IP Cameras. The 4 Gigabit ports provide enhanced uplink capabilities for greater throughput. An integrated part of this switch family is the IP Clustering function. The feature allows customers to group together up to 32 switches into a single logical group which can be managed using a single IP address. The switch also boasts advanced Quality of Service features that can reduce the latency of packets through the network, with specific traffic prioritization improving the delivery of converged data such as voice and high-quality video over IP. The gigabit ports are 2 10/100/1000 ports plus 2 combo gigabit ports (RJ-45/SFP). The PoE function allows up to 15.4W maximum per port. Overall, this switch is part of a flexible switch family which brings PoE and non-PoE switches to the edge of the network.

**KEY FEATURES**

- **Power over Ethernet Capability**
  With IEEE802.3af compliant PoE on all 10/100 ports, devices such as VoIP Phones and IP cameras can be installed without running separate power lines.

- **High-gigabit port density in a small footprint**
  With 24 fast Ethernet ports, 2 Gigabit Ethernet Ports, and 2 Combo ports, this switch provides high speed and legacy connections to all nodes on the network. The 2 combo ports allow fiber connections to be connected, thereby ensuring a migration path for network installations.

- **Flexible QoS and VLAN**
  QoS allows prioritization based on 802.1p and DSCP using 4 priority queues for better network performance and VLAN support with automatic GVRP LAN registration for more efficient management.

- **IP Clustering**
  IP Clustering allows up to 32 units to be managed from a single IP address.
